

Grading Rubric for Target increment demo

- The grade for the demo video will be based on the following rubric:
 - 6: Nothing works. Turned in explanation
 - 7: Video demo of the minimal system turned in, but target system doesn't work
 - 8: Most features work, but some don't
 - 9: Everything works as expected
 - 10: Exceeds expectations
- In addition to the video, we would like you to write up a list of "lessons learned." Some things to think about: What worked well? What didn't work too well? What advice would you give to someone taking this course next semester? What lessons were learned that can be applied to real projects?
